## I. QUESTION

**Q(6), C , Section-A, Chapter-8:** If a circle passes through the point (a,b) and cuts the circle  $x^2 + y^2 = k^2$  orthogonally, then the equation of the locus of its center is.

let, the center of the circle which passes through the point L and cuts the circle  $x^2 + y^2 = k^2$  orthogonally is:

$$\vec{U}_2 = \begin{pmatrix} x \\ y \end{pmatrix} \quad (3)$$

## II. SOLUTION

Figure 1: a circle passes through the point L and cuts the circle  $x^2 + y^2 = k^2$  orthogonally

With the given circle equation  $x^2 + y^2 = k^2$ , we can find out centre  $U_1$  and radius  $r_1$  of Circle-1

### STEP-1

Centre of Circle-1,

$$\vec{U}_1 = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$$

Radius of Circle-1,

$$r_1 = k$$

### STEP-2

$$\vec{L} = \begin{pmatrix} a \\ b \end{pmatrix} \quad (4)$$

Radius of Circle be  $r_2$

As both the circles are orthogonal, we get:

$$\|\vec{U}_2 - \vec{U}_1\|^2 = r_1^2 + r_2^2 \quad (5)$$

where

$$\Rightarrow \|U_2 - U_1\|^2 = \|U_2\|^2 + \|U_1\|^2 - 2U_1^T U_2 \quad (6)$$

$$\Rightarrow r_1^2 = k^2 \quad (7)$$

$$\begin{aligned} \Rightarrow r_2^2 &= \|U_2 - L\|^2 \\ &= \|U_2\|^2 + \|L\|^2 - 2L^T U_2 \end{aligned} \quad (8)$$

substitute equation (6),(7),(8) in equation (5)

$$\begin{aligned} \Rightarrow \|U_2 - U_1\|^2 &= r_1^2 + r_2^2 \\ \Rightarrow \|U_2\|^2 + \|U_1\|^2 - 2U_1^T U_2 &= k^2 + \|U_2\|^2 + \|L\|^2 - 2L^T U_2 \end{aligned}$$

(1) by solving the above equation we get,

$$\begin{aligned} \Rightarrow 2L^T U_2 &= k^2 + \|L\|^2 \\ \Rightarrow 2L^T U_2 &= k^2 + L^T L \end{aligned} \quad (9)$$

(2)

equation (9) is the required equation, which is a line equation  $n^T X = c$

## CONSTRUCTION

Symbol	Value	Description
$\vec{U}_1$	$\begin{pmatrix} 0 \\ 0 \end{pmatrix}$	center of given circle
$r_1$	k	radius of given circle
$\vec{U}_2$	$\begin{pmatrix} x \\ y \end{pmatrix}$	center of circle 2
$\vec{L}$	$\begin{pmatrix} a \\ b \end{pmatrix}$	a point on circle 2
$r_2$	$  \vec{U}_2 - \vec{L}  ^2$	radius of circle 2
